

The logo for L.CROWN, featuring the text "L.CROWN" in a light orange, sans-serif font. Below the text is a stylized graphic of four human figures in the same light orange color, arranged in a row. The figures are composed of simple geometric shapes: circles for heads and vertical bars for bodies. The central figure is slightly taller than the others.

Connected Industries 5.0

Omotenashi

“Connected Industries” is the future vision that Japanese industries should aim for in order to overcome such an intensely competitive and rapidly changing environment.

People, technologies, machineries, and everything connect with each other across the boundaries of enterprises, industries, and nations.

By creating new products, services, and values through this connectedness, we will solve various challenges facing humankind.

A light gray world map is centered in the background of the slide. The map shows the outlines of the continents: North America, South America, Europe, Africa, Asia, and Australia. The text "Global Innovation Economy" is overlaid on the map, centered horizontally and slightly above the vertical center.

Japanese hospitality as the basis of IoT

To create a global IoT network, L.CROWN lays the Japanese spirit of hospitality in the heart of its IoT system. Indeed, IoT accelerates efficiency at a tremendous scale. However, this is only one aspect of what IoT can achieve. Our ultimate goal is to create a good quality of life through the delicate and compassionate Japanese spirit at the base of our global IoT system.

L.CROWN

**Our Japanese
Know-how**

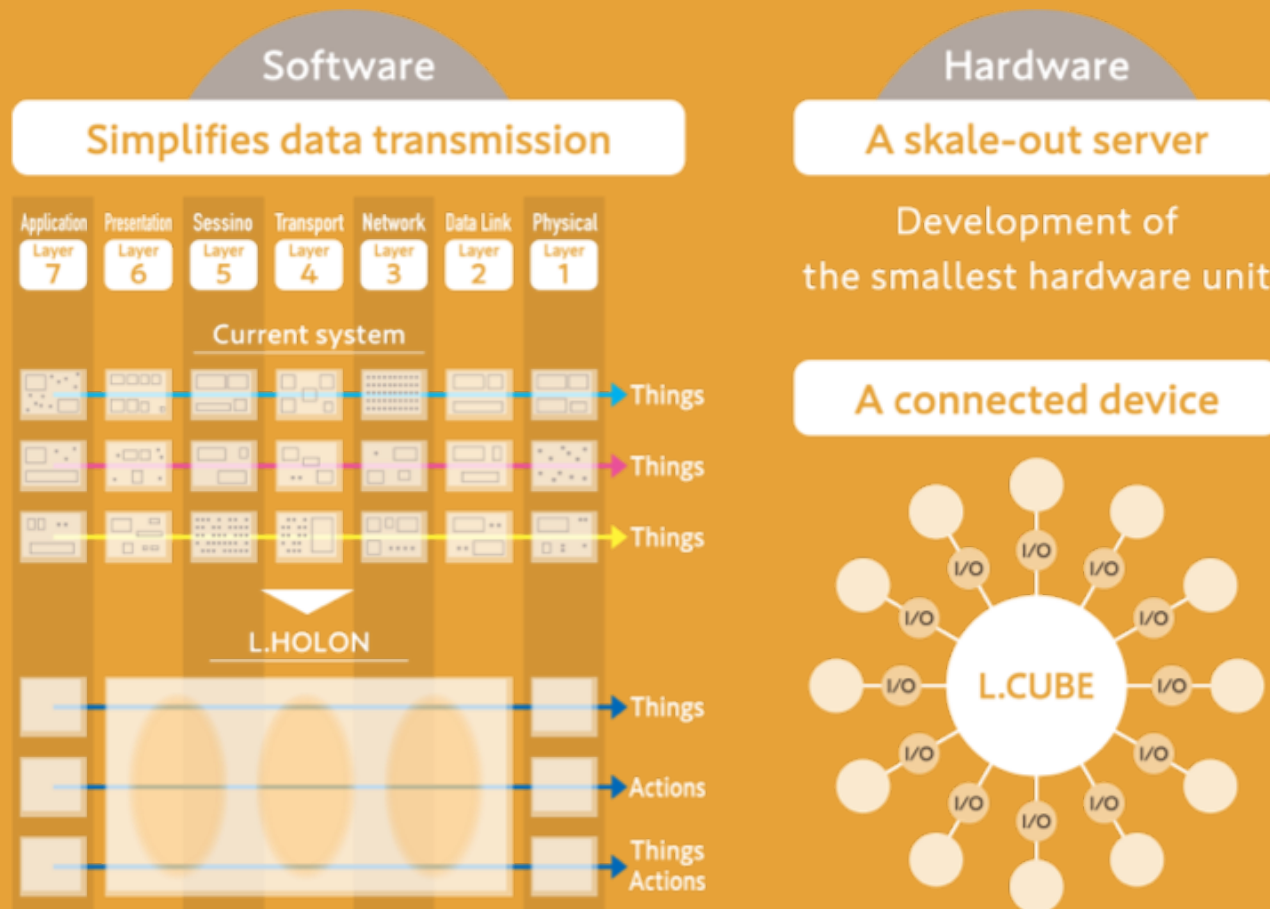

IoT is hospitality

In Japan, technology has advanced by constantly responding to each user's subtle needs. Technology is not a mere set of skills we present to users. It is a means to create a higher QOL by carefully listening to customer's voices.

This is the Japanese know-how which is deeply rooted in our IoT philosophy and this enables us to create unprecedented efficiency throughout the world.

L.CROWN's IoT Technology

L.Holon is Configured with the Smallest Hardware

Our L.HOLON system is configured with L.CUBE (or L.HOLON substrate).
We create universal connectivity by combining the L.HOLON system with our original connected device.

User Interface

Graphic UI

iOS App/Android App

Perceptual UI

Amazon Echo/Google home/

AI Robot UI in the future

Server Hardware

L.CUBE

- Designed by L.CROWN
- L.HOLON inside
- Multi-connectivity model integrated
- Small and exquisite

Server OEM

- Customizable (small to large)
- L.HOLON installation

Things and Surroundings

Facility and sensor

*Ranging over 150 varieties

- Air conditioning, Lighting,...
- Sensor, meter, camera
- PLC
- Robot

IoT connectivity H/W

- Gateways
- Controllers
- Communication Units

Other systems

- Cloud service
- HEMS, BMS, MES, CCTV...

A New and Ideal Communication Platform

L.HOLON does not only connect to various devices but also creates a network with cloud services, digital signage systems and work attendance management systems. The wider the IoT network expands, it increases its efficiency to support people's decision making processes.

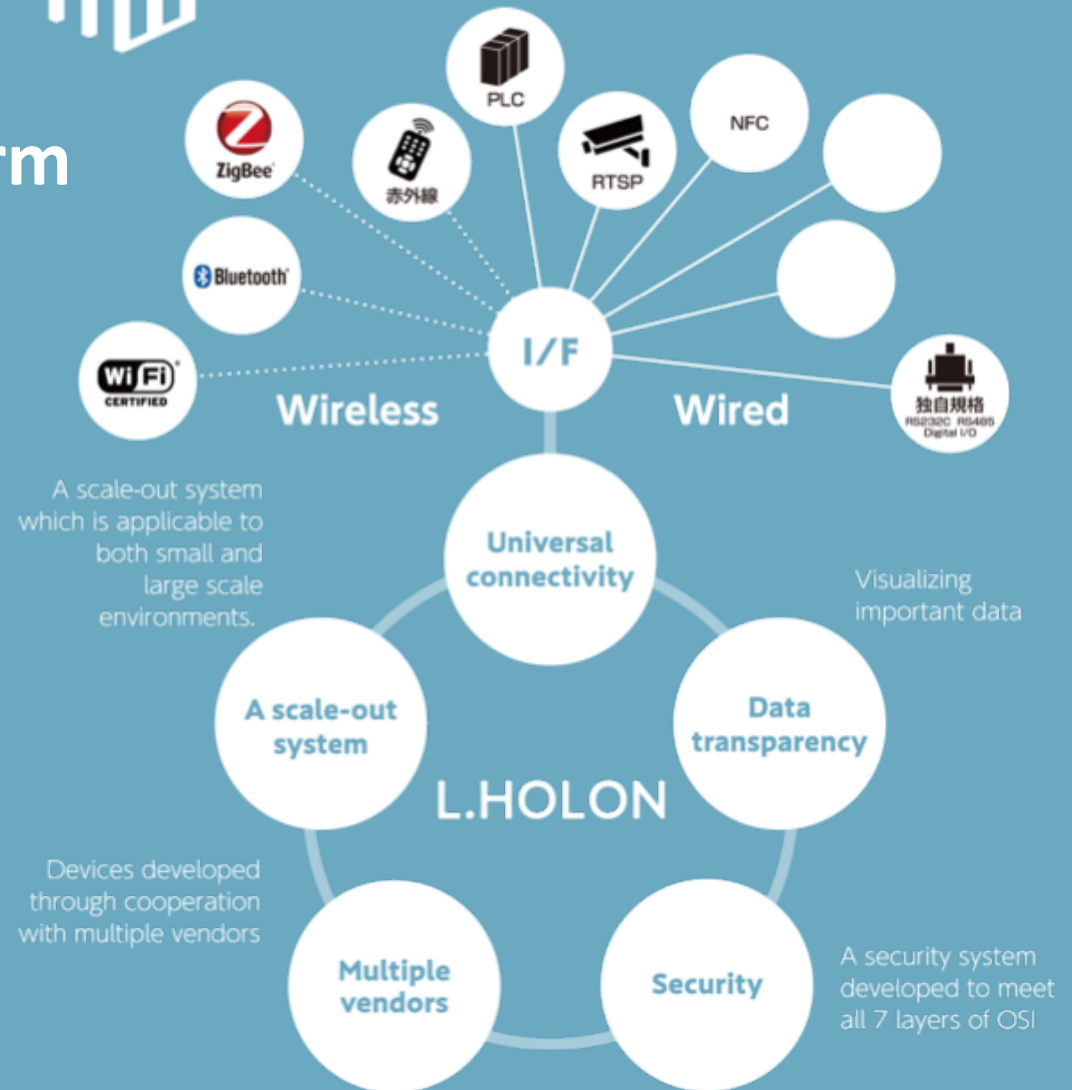

A Unique Communication Platform L.HOLON

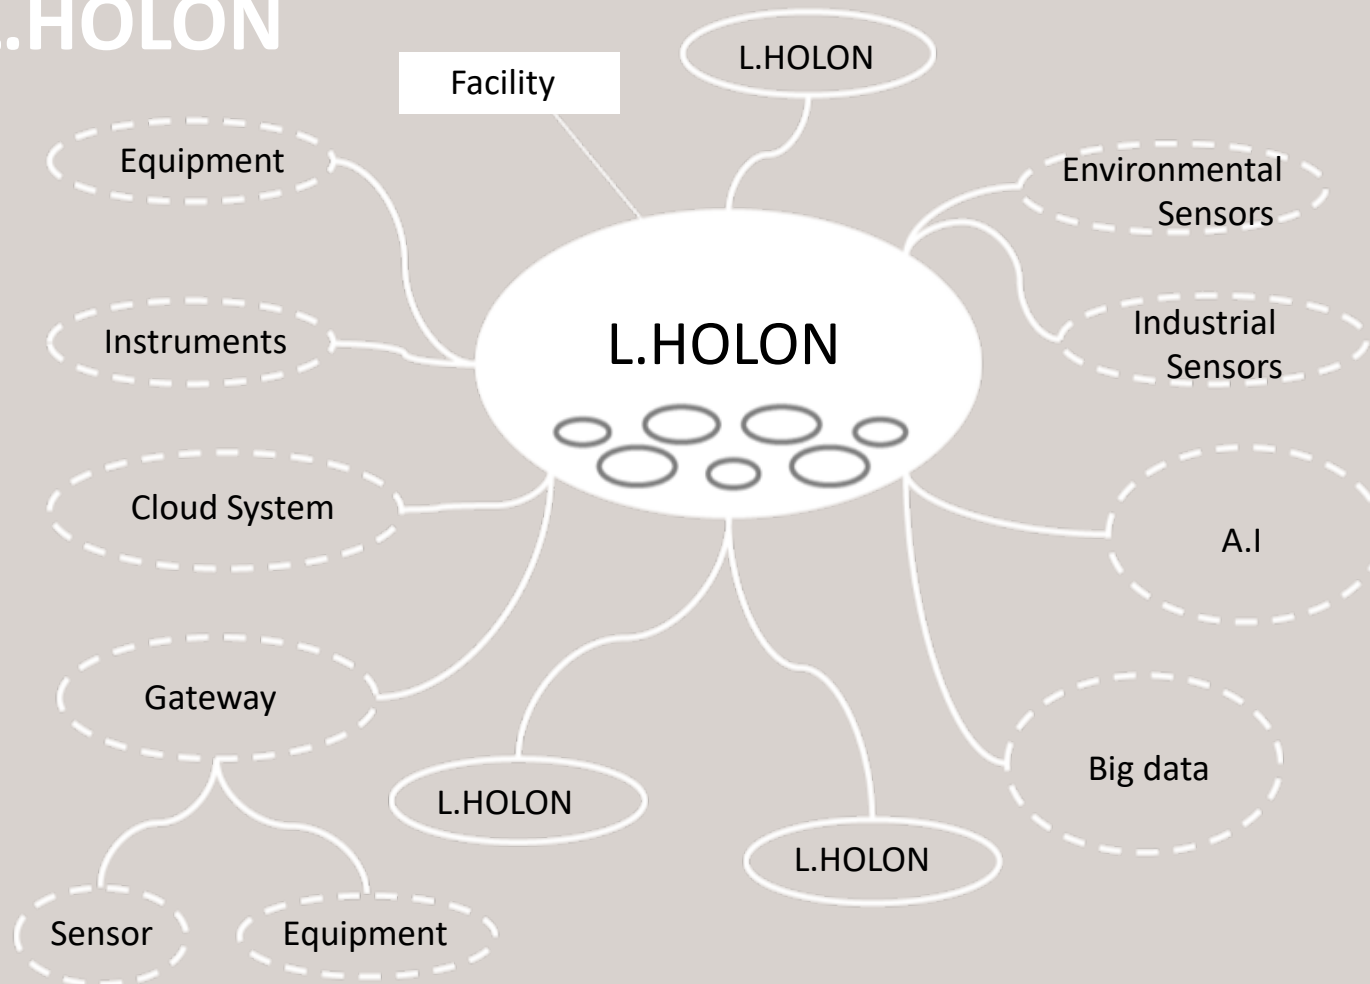

Our know-how is based on the Japanese "Mottai-nai" spirit, which finds value in utilizing old goods.

Our unique L.HOLON platform aims to transcend the boundary of time by enabling systems from all ages connect to the past, the present and the future.

L.HOLON safely transmits information between systems at real time, constantly protecting all data within its highly secure system.

The Connection of L.HOLON

An Addable Hardware which can Adjust to Environments at Any Scale.

A scale-out hardware system which can be adapted not only to small-and -medium but also mega sized environments, by utilizing L.CUBE as the basic unit.

L.HOLON Saves Energy and improved production efficiency

Using FSS (Facility Support System) and acquiring all kinds of data through the sensors, L.HOLON optimizes the system continuously through PDCA cycles and thereby reduces the electricity consumption to the lowest possible level.

AI simulation technology makes the optimization process even faster. And the optimization is not an one-off process but a PDCA cycle.

One of our customers, the first fully equipped IoT factory in Japan, reduced electricity consumption by 37% compared with the previous year. Also the customer have achieved multiple improvement of production efficiency.

37%

Energy saving
